

Project Summary

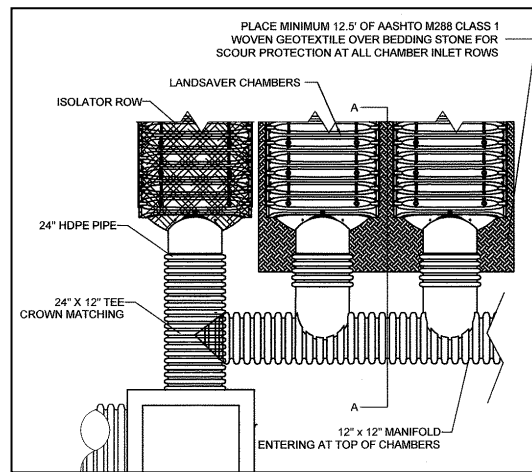

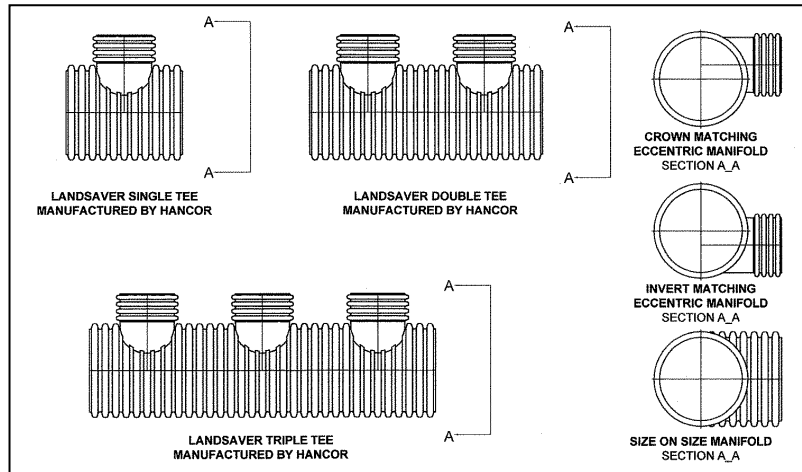

Aldi Site Plan City of Chardon, Geauga County, Ohio

- Commercial Site Plan
- Stormwater Management
- Underground Stormwater Chambers

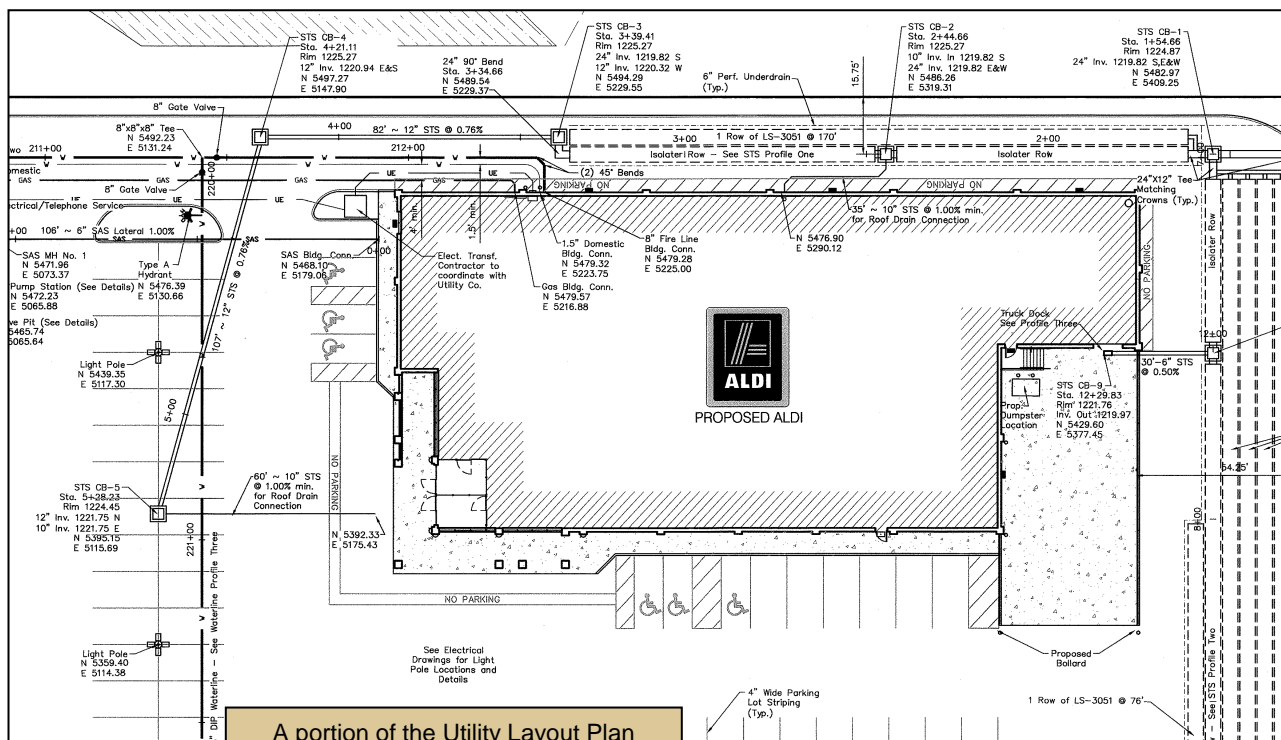

Foresight Engineering completed the site improvement plans for a new 16,590 square foot supermarket building located on a 3.6 acre site in the City of Chardon.

Site improvements included overall site grading and layout, parking lot design; utilities service connections, sanitary pump station; landscaping plans, and creation of a stormwater pollution prevention plan.

Stormwater management for the site was implemented by the installation of LandSaver™ Underground Storage Chambers. These chambers enabled the parking lot to be constructed over the stormwater retention area, allowing ample room on the site for all the necessary facilities.
