

## Project Summary

### Eagle Park Play and Spray Ground Village of Middlefield, Geauga County, Ohio

- Walking Paths
- Parking Lots for Vehicle and Horse and Buggy
- Playground Equipment
- "Sprayground" Equipment
- Stormwater Drainage Improvements
- Pavilion/Gazebo
- Restroom Facilities

As project engineer, Foresight Engineering completed the project design for Eagle Park, which included a "sprayground" (water park), traditional playground, walking paths, restroom facilities, parking areas for both vehicles and horses and buggies, a center pavilion grandstand, and landscaping coordination. Additionally, drainage improvements were made to the site with addition of catch basin inlets and storm sewers.

Sanitary sewer service lines, water service lines, and electrical lines were installed to service a restroom facility and to a maintenance building to house the control equipment for the sprayground. Features of the sprayground included tumble-buckets, and various forms of water jet sprays.

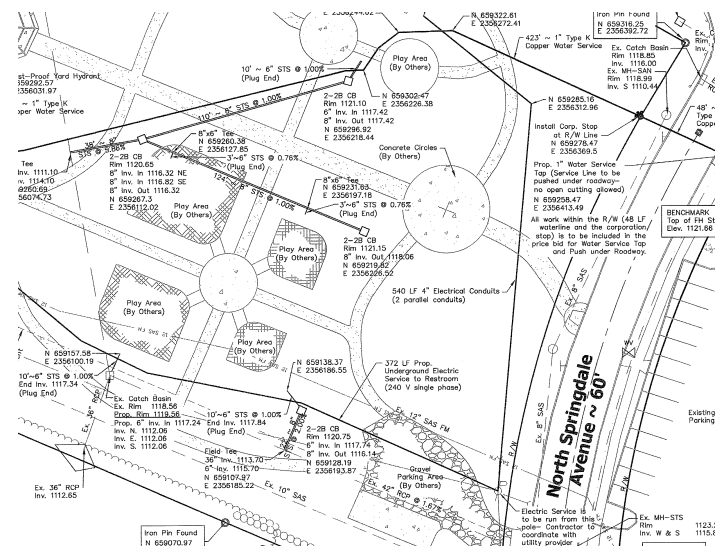

The scope of work for the project included topographic and boundary survey, layout and design, and preparation of improvement plans, cost estimate, bid documents and technical specifications.
